SUMMARY

Recent B.Tech graduate in Computer Science and Engineering with strong proficiency in Java, SQL, and web development, including HTML, CSS, and JavaScript. I am eager to begin my professional career as a Frontend Developer, where I can effectively apply my skills in creating dynamic and responsive user interfaces. With hands-on experience in API integration and a passion for continuous learning, I am excited to join an organization that values innovation and growth in the software development field.

EDUCATION

Presidency University, Bangalore   Graduation year 2024
- B.Tech in Computer Science & Engineering
- GPA: 7.45

Narayana Pu College, Ballari, Karnataka   Graduation Year 2020
- Course: PCMB
- Percentage: 80.83

SKILLS

- **Programming Languages :** Java, JavaScript, Html, CSS.
- **Tools :** Junit, Apache Maven, Git, GitHub, IntelliJ Idea, Visual Studio Code, Android Studio
- **Skills :** Web development, DBMS, Object-oriented programming(oops),
- **Soft Skills :** Communication, Problem solving, Attention to detail, Collaboration, Leadership, Self motivation, Continuous improvement

PROJECTS & LEADERSHIP EXPERIENCE

User Registration Desktop Application, Independent Project

- This project is a desktop application developed using Java, utilizing the JSwing class for the user interface.
- It serves as a user registration system where individual can register themselves within the application
- The application employs SQLite as the database management system to store user registration data securely
- Upon registration, the entered data is validated and stored in the SQLite database for future access.
- Registered users can subsequently log in to the application using their credentials at any time.
- The application ensures data integrity and security by employing SQL queries for database interactions and encryption for sensitive information.

Shopping Cart Web App, Independent Project
- This Shopping Cart Application is a web-based project built using HTML, CSS, JavaScript, and local APIs.
- It provides a seamless shopping experience by allowing users to browse products, add them to a cart, and view the total bill.
- The application dynamically displays product details, saves selected items in the cart, and calculates the total cost.
- The use of local APIs ensures the application is lightweight and responsive, making it a solid foundation for more advanced e-commerce projects.
